**HYDROGRAPHS AND TABLES SHOWING GROUNDWATER LEVEL
AND PUMPAGE RECORDS FOR SELECTED OBSERVATION WELLS IN
CHARLES COUNTY, MARYLAND**

SUMMARY

This report presents water-level data for 28 observation wells in Charles County. Water levels are tabulated for measurements from July 2024 through June 2025. Water-level hydrographs are shown for the entire period of records at each site. Data, collected by the Maryland Geological Survey (MGS) and the United States Geological Survey (USGS) are stored in the National Water Information System (NWIS) database, maintained by the USGS. Current and historical groundwater data may be obtained from the USGS website at <http://waterdata.usgs.gov/nwis/gw>, or through an interactive map on the MGS website at http://www.mgs.md.gov/groundwater/water_level_mapper.html.

This report also presents groundwater withdrawals correlated with water levels in 8 observation wells, from July 2024 through June 2025. Pumpage data was obtained from Charles County Department of Public Utilities.

Water levels in the **Magothy aquifer** fluctuate with usage but the overall trend shows continuing gradual declines. The largest fluctuations, up to 60 feet, occurred at St. Charles (CH Bf 133) (fig. 4). Water levels range from 67.98 ft below sea level at Sun Valley (CH Be 43) to 134.48 ft below sea level at St. Charles (CH Bf 133). Recent pumpage in the Waldorf area ranged from 2.49 million gallons per day (Nov 2024) to 3.31 million gallons per day (July 2024) (tab. 1). Plots in figures 3 and 4 show the correlation between water levels and pumpage in the Waldorf area.

Water levels in the **Upper Patapsco aquifer system** fluctuate as much as 9 feet in response to pumping and have continued to decline slightly or hold steady in recent years. Water levels range from 16.64 ft below sea level at Douglas Point (CH Da 21) to 83.48 ft below sea level at St. Charles (CH Bf 157). Plots in figures 9 and 10 show water level trends in the Upper Patapsco aquifer within the Waldorf area.

Water levels in the **Lower Patapsco aquifer system** fluctuate seasonally due to usage but have exhibited flat or recovering trends in the past few years. Fluctuations due to pumping are especially apparent in the La Plata area (CH Ce 56) where water levels varied as much as 27 feet, and St. Charles (CH Bf 146) where they were almost 11 feet. Water levels in the Lower Patapsco system range from 18.25 ft below sea level at Douglas Point (CH Da 20) to 173.06 ft below sea level at La Plata (CH Ce 56). Recent pumpage in the Waldorf area ranged from 1.28 million gallons per day (Dec 2024) to 2.94 million gallons per day (June 2025) (tab 2). Plots in figures 6 and 7 show the correlation between water levels and pumpage in the Waldorf area. Figure 13 shows that water levels at Potomac Heights (CH Bc 24) are continuing to stay above the 80% management level as required by MDE, though recent levels are still within 15 feet of the regulatory threshold level.

Water levels in the **Patuxent aquifer system** have continued to decline within the past year. In western Charles County, water levels at Chapmans Landing, Bryans Road and Mattawoman Water Treatment Plant (CH Bc 75, CH Bc 77, CH Bc 78 and CH Cc 34) continue to decline at rates of up to approximately 5 ft/yr. Water levels in the Patuxent aquifer system range from 14.89 ft below sea level in the western part of the county at Douglas Point (CH Da 18) to 126.6 ft below sea level at Chapman's Landing (CH Bc 75). Recent pumpage in the Bryans Road area ranged from 462,227 gallons per day (Nov 2024) to 549,677 gallons per day (July 2024) (tab. 3). Plots in figures 15 and 16 show the correlation between water levels and pumpage in the Bryans Road area. Plots in figures 12 and 13 show water level trends in the Patuxent aquifer in Waldorf.

AQUIFER: Patuxent aquifer of the Patuxent Formation of Lower Cretaceous age.

WELL CHARACTERISTICS: Drilled, artesian well, depth 940 ft;

Casing diameter: 8 in. to 820 ft, 825 to 860 ft, 880 to 898 ft, and 923 to 940 ft;

Screen diameter: 8 in. from 820 to 825 ft, 860 to 880 ft, and 898 to 923 ft.

INSTRUMENTATION: Periodic measurements.

DATUM: Altitude of land surface is 109.64 ft above NGVD of 1929 (Start June 2021)

MEASURING POINT: Top of casing 2.5 ft above original land surface. (Start June 2021)

PERIOD OF RECORD: June 1993 to current year.

EXTREMES FOR RECORD: Highest water level measured, 120.95 ft below land surface, on September 26, 1994; lowest measured, 236.24 ft below land surface, on June 30, 2025.

REMARKS: Beginning in June 2021, a new reference measuring point was used. The hydrograph record was corrected to the new datum for this report.
